

Known Problems in FOCUS Version 7.2

FOCUS Area	System	Symptom
ANALYSE	CMS MVS	ANALYSE is displaying 0 values for SELECTION
AUTOIMS	MVS	Users may occasionally experience an OC4 abend at FIN.
Extended Curr	CMS MVS	FORMAT PDF and HTML display the wrong symbol for the euro.
External Index	CMS MVS	External indexes built prior to 7.0.9 need to be rebuilt when upgrading to a higher release.
	CMS MVS	External index retrieval from a multi-partitioned database may fail with FOC995.
FORMAT CALC	CMS	CMS FILEDEF to create CALC files on VM yields a FOC756. Workaround is to not issue a FILEDEF. FOCUS will create the CALC files on largest writable disk.
FORMAT EXCEL	CMS	If you create a FORMAT PDF file and then try to create a FORMAT EXCEL file, the filetype will be PDF instead of XLS. Rename the file to have filetype XLS in order to use the report output.
FUSION	CMS MVS	<p>If you have the following syntax in a FOCUS Master file:</p> <pre> SEGNAME=C2, SEGTYPE=DKU, PARENT=C1, CRFILE=VALIDA, CRKEY=BOOKNUM, CRSEGNAME=A0, \$ SEGNAME=C3, SEGTYPE=KL, PARENT=C2, CRFILE=VALIDA, CRSEGNAME=A1, \$ SEGNAME=C4, SEGTYPE=KLU, PARENT=C2, CRFILE=VALIDA, CRSEGNAME=A5, SEGNAME=C5, SEGTYPE=KLU, PARENT=C4, CRFILE=VALIDA, CRSEGNAME=A6, </pre> <p>REBUILD/MIGRATE does not convert the second KLU segment, C5 in this example, into Fusion Master Syntax.</p> <p>The Fusion Master File then contains the following syntax:</p> <pre> JOIN_TO VALIDA.A0.BOOKNUM LINK_TO VALIDA.A1 LINK_TO VALIDA.A5 AS C2 </pre> <p>After performing a REBUILD/MIGRATE on the syntax above, the user cannot add a second LINK_TO for the second KLU because it becomes a peer to C4 instead of a child of C4.</p>
	CMS	<p>REBUILD/MIGRATE for VM users gives the following message at the LOAD phase even though the Fusion database file is empty:</p> <pre> NEW FILE ALREADY EXISTS LOAD WILL ADD TO THIS FILE... DO YOU WISH TO CONTINUE (Y/N) </pre> <p>Once this question is answered with 'Y', the process continues to completion.</p>
MASTER FILE	CMS MVS	After issuing a ? FILE query against a 2-gigabyte Fusion database loaded by MODIFY, a FUS20036 error results.
	MVS	DECRYPT occasionally abends in MVS batch under HIPERFOCUS, only if the DECRYPT file is non-existent.
	CMS	VM abends when attempting to parse a master with DBCS symbols.
	CMS MVS	CHECK FILE fails with FOC207 if fields are described in Hebrew format, i.e. AH1 for a Hebrew alpha field.

FOCUS Area	System	Symptom
MSO	MVS	Problems connecting to MSO via TSO. Symptoms include a hang or a potential SOC4 on the TSO client The MSO region itself should not be impacted
	MVS	Users' MSO session may abend on PF3 after executing TSO SDSF functions.
National Language Error Messages	CMS	MVS New FOCUS errors for Version 7.2 have not been translated.
OFFLINE	CMS	The minimum LRECL for OFFLINE is 33.
REBUILD	MVS	REBUILDMSG parameter is not working on MVS. It uses the default of 1000 records.
	CMS	If LOCATION files exist on disk other than A, issue USE prior to REBUILD.
TABLE	CMS	MVS CONTROL OPTIONS at BY 'tilefield' and ON 'tilefield' do not work with the TILES feature A fix is scheduled for the next release.
	CMS	MVS In a COMBINE of two files, if the first one has a cross-referenced segment from the second, null data is retrieved when accessing fields in the cross-referenced segment in subsequent TABLE requests.
	CMS	MVS Non-recursive FORECAST with a subfoot and column notation generates several FOC203 messages, then FOC204 processing interrupted.
Web Interface	CMS	MVS ON TABLE PCHOLD does not produce a report.
