

FOCUS Release

TM7939

**HiperEDA: Necessary Software Updates**

Information Builders is recommending that all customers that are using the HiperEDA product at the affected release levels install the software correction described below.

**Affected Release Levels:**

- Version 3 Release 1 Maintenance Level 6
- Version 3 Release 2 Maintenance Level 1
- Version 3 Release 2 Maintenance Level 3

**Problem Description:**

EDA may generate reports that have duplicate record conditions and incorrect output. When the Hiper allocation for a flat file is exceeded, the spill to disk function is used to complete the creation of the file. The last 4k of data in the cached portion of the file is invalid. Usually it is a repeat of an earlier 4k block of data in the same file.

**Software correction:**

Applying the appropriate superzap or PTF tape listed below corrects this problem.

Product	Release	PTF number	Superzap format
EDA	V3R1M6	72777	yes
EDA	V3R2M1	72778	yes
EDA	V3R2M3	72779	yes

**Ordering Procedures**

To order the appropriate corrective software please call Information Builders Customer Support Services at (800) 736-6130.

The superzaps are also available on the IBI anonymous FTP server, ftp.ibi.com, in directory PUB/IBMDIV, as file names in the format ptf\_number.PTF. Customers that have an FTP connection to the internet may obtain these files with the GET FTP command once they log on as user ANONYMOUS.

Customers that have an internet connection and a WEB browser may go to URL ftp://ftp.ibi.com and retrieve the appropriate superzap ptf by selecting the PUB directory, IBMDIV directory, and then the appropriate ptf\_number.PTF file listed in the above chart.
