

CMDQMODE : Command Queue Mode

This parameter applies to the BS2000 operating system only.

Parameter	Specify ...	Possible Values	Default
<u>CMDQMODE</u>	whether to allocate the command queue memory pool below or above the 16-MB line.	BELOW ABOVE	BELOW

CMDQMODE specifies whether to allocate the BS2000 memory pool for the Adabas command queue below or above the 16-MB line.

Value Meaning

- | | |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------|
| BELOW | The default setting. Places the BS2000 memory pool for the Adabas command queue below the 16-MB line in one or more 64-kilobyte segments. |
| ABOVE | Places the BS2000 memory pool for the Adabas command queue above the 16-MB line in one or more 1-MB segments. |

Example:

Place the Adabas command queue memory pool above the 16-MB line in 1-MB segments.

```
ADARUN PROG=ADANUC,CMDQMODE=ABOVE
```
