

Computer Operator Commands

This documentation is a guide for computer operators who wish to communicate with and control the Com-plete system. It is assumed that the reader is familiar with operational procedures directly related to the host operating system.

The Computer Operator documentation contains the following information:

●	Introduction	Explains how the operator can start and stop Com-plete, change the nucleus name and describes the command syntax.
●	Overview of Commands	A table listing available operator command and their meaning.
●	Operator Commands	Describes the Com-plete operator commands in detail.
●	Operation Codes	Lists the operation codes that are supplied in some of the Com-plete output displays.
●	Task, Thread, Status	Lists the status messages that can appear in some Com-plete output displays.
