

# Z-GET03B

This chapter covers the following topics:

- Description
  - Parameters
  - Return Codes
  - Subprograms
- 

## Description

Return information about an appointment or meeting.

This subprogram returns the next appointment or meeting beginning with the date and time entered in the Current-date and Current-start parameters. On the following days, all calendar entries which exceed one day are returned starting with midnight (and not with the time you specified for the first day).

The following information pertains to the returned list. For each calendar entry, the parameters Current-date, Current-start and Current-end refer to the start and end time of each day. If a calendar entry extends past midnight, Con-nect automatically splits the entry for each day.

For a private calendar entry not belonging to the invoking cabinet, only the date and time are returned. The private entry has an asterisk (\*) in the subject line; description and location are not returned.

The timezone is always GMT. Other timezones are not considered.

Provided that the Work-parameter is not corrupted by the calling program, this subprogram can be invoked iteratively to return successive appointments or meetings.

## Parameters

Parameter	Format	In	Out	Remarks
Return-code	N2	O	X	Input -1: no ET.
Cabinet	A8	R		The cabinet which contains the appointment or meeting for which you want to return information.
Password	A8	R		The password of the above cabinet.
Current-date	A8	R	X	Format yyyymmdd. See the description above.
Current-start	A8	O	X	Format hhmm. See the description above.
Current-end	A8		X	The end time of the currently returned appointment or meeting. Format hhmm.
Subject	A20		X	The subject of the appointment or meeting.
Description	A60/1:3		X	The description of the appointment or meeting.
Location	A60		X	The location of the appointment or meeting.
Object-number	N2		X	3=appointment, 16=meeting.
Range-type	A1		X	1=the whole time range, 2=separate daily entries, 3=only a starting time.
No-occupation	A1		X	Blank=the calendar entry occupies time; left parenthesis=the calendar entry does not occupy time.
Daily-entries-status	A1		X	*=First day, >=continued from the previous day, <=last day.
Work-parameter	A40			For internal use. See <i>The Work Parameter</i> .

## Return Codes

00	Success
02	Invalid cabinet name
03	Password incorrect
41	Invalid start-date
42	Invalid start-time
77	End of list
