Description

Return a list of appointments or meetings which have the specified keywords.

The returned list contains only one kind of object (as specified in the parameter Object-number). Only the objects containing all specified keywords are returned.

When a calendar entry extends over several days or when it continues after midnight (e.g. when it is scheduled from 11 PM to 2 AM), it is returned only once.

This subprogram should be invoked iteratively until the return code 77 indicates the end of the list.

You cannot use this subprogram if the returned list is to contain more than 99999 results.
