# Release Notes

This document describes the new and modified features for Con-nect/Con-form Version 3.4.1, Con-nect Teleservices Version 2.6.1, and Con-nect SNADS Version 1.5.1. It consists of the following sections:

	Installation	Changes for installation and documentation prerequisites.
	New Features and Enhancements	Detailed information about what is new and what has changed in this version of Con-nect and Con-form.
	Corrections	Overview of the problems that have been solved.

## Con-nect GUI

Entire Screen Builder Version 5.2.1 is the last version to deliver Con-nect GUI. In future versions, it will no longer be available on the Entire Screen Builder CD. There will be no further development for Con-nect GUI.

The last version that has been delivered is Con-nect GUI 1.1.3 which runs with Con-nect Version 3.3.3 and 3.3.2.

The Con-nect GUI documentation is no longer provided with the Con-nect documentation.

# Installation

This section provides the following information:

- Installation Prerequisites
  - Prerequisites for Reading the Online Documentation
- 

## Installation Prerequisites

Con-nect is a subsystem of Natural. Con-nect/Con-form Version 3.4.1, Con-nect Teleservices Version 2.6.1, and Con-nect SNADS Version 1.5.1 are compatible with Natural Version 4.1.2 or above.

Adabas must be installed so that it is possible to display the documents in a cabinet in descending alphabetical order (i.e. page backwards). The required Adabas version is dependent upon the Natural version running on your system. For further information, see the Natural documentation.

The prerequisites for Con-nect are listed in *General Information for Con-nect* in the *Con-nect Installation and Operations* documentation.

The prerequisites for Con-form are listed in *General Information* in the *Con-form Installation* documentation.

## Prerequisites for Reading the Online Documentation

<b>HTML Browser</b>	<p>For viewing the online documentation, a browser capable of supporting Java, JavaScript, and Cascading Style Sheets is recommended. The documentation has been successfully tested with these products:</p> <ul style="list-style-type: none"> <li>● Microsoft Internet Explorer version 5.x or 6.x.</li> <li>● Mozilla version 1.4.</li> </ul> <p>Both browsers are freely available for download.</p>
<b>Java Browser Plugin</b>	<p>The documentation has been successfully tested with the following browser plugins:</p> <ul style="list-style-type: none"> <li>● <ul style="list-style-type: none"> <li>Sun JVM 1.4.1_01</li> <li>Sun JVM 1.4.2_01, 1.4.2_02, 1.4.2_03</li> <li>There have been problems with the online documentation when using Sun's JVM 1.4.0 as the browser plugin.</li> </ul> </li> <li>● <ul style="list-style-type: none"> <li>Microsoft Java Virtual Machine 5.0.0.3810</li> </ul> </li> </ul> <p>If you use the Microsoft JVM then we recommend the Java Virtual Machine 5.0.0.3810. If you are using an older version of the Microsoft JVM, we strongly recommend you to upgrade it in order to avoid problems (such as the full-text search hanging up). By upgrading you also benefit from Microsoft's latest security enhancements. If you want to upgrade your Microsoft Virtual Machine please visit the Microsoft web site (<a href="http://www.microsoft.com/">http://www.microsoft.com/</a>).</p> <p>For Windows XP and Windows Server 2003 users we recommend going to <a href="http://java.com/">http://java.com/</a> to acquire a free Java browser plugin.</p>
<b>PDF Reader</b>	<p>For viewing the PDF documentation:</p> <ul style="list-style-type: none"> <li>● Adobe Reader</li> </ul> <p>The Adobe Reader is freely available for download.</p>

# New Features and Enhancements

New features and enhancements are available in the following areas:

- Administration
  - End-User Functions
  - Utilities
  - Application Programming Interface
  - Con-form
- 

## Administration

### Cabinet Maintenance - User Profile

You can now specify whether a "Reply" column is to be shown in the Inbasket and Outbasket. When it is to be shown, you can specify whether the character in the "Reply" column indicates a reply to/from the sender, or a reply to/from any user. See the description of the "Folders" window in *Con-nect Administration*, section *Cabinet and User Profile*.

You can now display the version number of the Con-nect version that is installed at your site. See the description of the "Con-nect Version" window in *Con-nect Administration*, section *Cabinet and User Profile*.

### Special Print Module

The special print module C0711U now also prints the list of replies. See *Con-nect Administration*, section *Special Con-nect Print Modules*.

### D-TRACE Error Log

Subcodes for Adabas errors are now included in the D-TRACE error log. See *Con-nect Administration*, section *The Con-nect Error Log*.

### Cabinet Transfer Reload Utility

If the transfer file contains a cabinet that already exists in the target Con-nect system file, the cabinet is not transferred and a message is displayed when this utility is completed.

## End-User Functions

### User Profile

You can now specify whether a "Reply" column is to be shown in the Inbasket and Outbasket. When it is to be shown, you can specify whether the character in the "Reply" column indicates a reply to/from the sender, or a reply to/from any user. See *Con-nect User's Guide*, section *Folders and Password*.

You can now display the version number of the Con-nect version that is installed at your site. See *Con-nect User's Guide*, section *Con-nect Version*.

### Utilities

#### B06250 - Modify Profiles

You can now specify whether a "Reply" column is to be shown in the Inbasket and Outbasket. See *Con-nect Utilities*, section *Modify Profiles*.

#### B07050 - Print Cabinet Logons

It is now possible to create reports without headers. To do so, you must rename program B0705U in the SYSCNT2 library to B07059. Thereafter, this program is called each time you invoke B07050. To revert back to printing reports with headers, you simply rename B07050 to B0705U. See *Con-nect Utilities*, section *Cabinet Logons*.

#### B07100 - Print Distribution Lists

This new utility prints a list of all distribution lists in which the specified member(s) is defined. The resulting printout contains the name of the distribution list in which the specified member is defined, the cabinet, member ID, member name and type of member. See *Con-nect Utilities*, section *Print Distribution Lists*.

#### B07130 - Print Folder Content

Print the contents of the specified folder or folder/file. The contents of a folder are printed, by default, according to the layout defined for that folder. See *Con-nect Utilities*, section *Print Folder Content*.

#### B99131 - Fix Corrupted Objects

Check and repair all objects in the specified cabinets and folders (except for those objects which are repaired by other utilities). See *Con-nect Utilities*, section *Fix Corrupted Objects*.

# Application Programming Interface

## Z-CMFVER

This new API subprogram returns the version number of the currently installed Con-form version. See *Con-nect Application Programming Interface*, section *Z-CMFVER*.

### **Important:**

The following applies to previous 3.3.*n* versions of Con-form. Z-CMFVER returns the version only if the corresponding zap has been applied: FM36013 for Con-form 3.3.3, FM35016 for Con-form 3.3.2, or FM34018 for Con-form 3.3.1.

## Z-SRCH17

This new API subprogram returns a list of all distribution lists containing a specific member. See *Con-nect Application Programming Interface*, section *Z-SRCH17*.

## Con-form

### **.SV Instruction**

The maximum value for a text value after the equal sign may now exceed 100 characters. In previous versions, this was restricted to 100 characters. See *Con-form User's Guide*, section *.SV - Set Variable*.

### **COMPOSE Statement**

The COMPOSE statement can now be used with long variables in Natural. See the *Natural Statements* documentation for further information.

# Corrections

Problems have been solved in the following areas:

- Administration
  - End-User Functions
  - Utilities
  - Con-nect Error Map
  - Con-nect SNADS
- 

## Administration

### Cabinet and User Profile

The modification date and time of a cabinet is now updated correctly.

### Special Print Module C0711U

The special print module C0711U now prints the list of addressees.

### Spool File

Error NAT0082 no longer occurs when displaying or deleting spool file entries.

## End-User Functions

### Lists of Objects

Performance in the "Contents of Folder Inbasket" screen has been enhanced. The error NAT1009 (MADIO exceeded) no longer occurs.

When you return to a list of objects (documents, reference documents or menus), an object is no longer moved to another position in the list.

### Formatting

When a document has enclosures where the format is not Txt, Cnf or Int, the error NAT0954 no longer occurs when formatting the document.

Abend S0C1 due to the internal local data area within the CSIZE no longer occurs during formatted printing (for example, with Z-PRI11G).

## Calendar

Erasing locked appointments now works correctly.

## Printing

When a left margin has been set, the correct page number is now used when printing.

## User Addresses

When displaying an address, the error NAT0936 now no longer occurs.

The time limit is no longer exceeded when modifying a name which contains a comma.

## Utilities

### B02130 - Copy Folder Contents

Distribution lists are now copied with the correct number of members.

### B04050 - Delete Pending Cabinets

History records of meetings are now deleted correctly.

### B06250 - Modify Profiles

It is now documented that the user profile fields "Left margin" and "Wrap print line" can also be selected from the "Mark to Copy from Pattern" screen as part of the pattern cabinet. See *Con-nect Utilities*, section *Modify Profiles*.

### B99050 - Fix Corrupted Cabinet Records

This utility now processes correctly, if the last cabinet is a shared cabinet.

## Con-nect Error Map

Dynamic parameters of Natural error messages are now replaced with the corresponding values in the Con-nect error map.

## Con-nect SNADS

The Con-nect SNADS administration function "Messages Awaiting Confirmation of Delivery" no longer produces NAT1143, NAT1301 or NAT3047 errors.

CSINIT has been enhanced so that the watchdog now starts correctly.
