

Schedules

Schedules contain the planned execution dates of job networks. They can contain periodic and / or explicit schedule dates. You can define an unlimited number of schedules, and one schedule can be referenced in different job networks.

If a schedule table is based on a predefined calendar, execution dates can be defined relative to holidays (for example: the last working day of a month).

For more detailed information, see the sections Schedules and Scheduling a Job Network in the Entire Operations User's Guide.
