

Installation Tape

This subsection covers the following topics:

- Contents of the Installation Tape
- Installing an Update Tape

Contents of the Installation Tape

The installation tape contains the files listed in the table below. The sequence of the files is shown in the **Report of Tape Creation** which accompanies the installation tape.

File Name	Contents
NOPnnn.JOBS	Entire Operations Installation Jobs (OS/390 and BS2000/OSD)
NOPnnn.LIBR	Entire Operations Load Library & Installation Jobs (VSE/ESA)
NOPnnn.SYS1	Entire Operations System File 1 (Adabas)
NOPnnn.SYS3	Entire Operations System File 3 (Adabas)
NOPnnn.INPL	Entire Operations System Libraries (Natural)
NOPnnn.ERRN	Entire Operations Error Messages (Natural)
NOPnnn.DATA	Input data (sample network definitions) for Entire Operations Import Utility.

* Some files for the solution of certain SAGSIS problems maybe included on the installation tape. Please refer to the problem descriptions before applying them.

The notation *nnn* in file names represents the version number of the product.

System Automation Tools files are included as described in the separate SAT Documentation.

Installing an Update Tape

The following applies to the Entire System Management products Entire Operations, Entire Output Management and Entire Event Management.

Before you update any production library or file using a single solution or an update tape containing a series of solutions supplied by Software AG, you must stop the Monitor of the relevant Entire System Management product. Do not start the Monitor before your entire update process is completed successfully. Use the Natural utility SYSBPM to purge all modules of the application SYSEOR from the Natural buffer pool.

This is necessary to avoid mixing the versions of the delivered software, for example in Natural libraries where such a mixture may lead to parameter errors like NAT0935, NAT0936 etc.
