

Deleting a User/Owner Link

To delete the link

- Enter **D** in the one-character input field preceding the appropriate owner in the Owner List window. Press Enter.

Notes:

1. A user linked to the owner SYSDBA is authorized to access any object in the whole system.
2. Once entered, owners can be removed from Entire Operations by calling the Natural program OW-DEL-P. The owner cannot be deleted if it is still linked to the following Entire Operations objects: calendar, network, symbol table, event. Furthermore, an owner cannot be deleted if it is specified as a main owner for any user. If an owner is deleted, then all links to the user are removed.
