

# Calendars

Calendars can form the basis for schedule tables defined for jobs and job networks. An Entire Operations calendar distinguishes between working days and non-working days as defined by the user (weekends, national holidays, personal vacations).

Calendars can be modified to change, include or delete non-working days. Modifications to calendars can affect the associated job network schedule(s).

Calendars are identified by owner, name and year, and can belong to an owner or be used system-wide. You can specify a system calendar or a calendar belonging to your owner for a schedule table, but you can only modify calendars belonging to your owner. System calendars can be modified by authorized users only.

Any number of calendars can be defined to Entire Operations. For further details, see the section Calendar Maintenance.
