

Logging Facility

The Entire Operations Logging facility records every event and user action during job network processing. This information is available online. From the system log, you can select more detailed logs for individual jobs if logging at job level is specified at job definition time.

The **default system log** displays information about activities in the system as a whole such as user actions, date and time of events and messages about events. If more information is available for any item on the system log, it is preceded by an asterisk (*). Log information at the job level can be any of the following:

- **JCL log**
Displays the JCL of a specific job run;
- **Sysout log**
Displays the sysout of a specific job run;
- **System message log**
Displays all operating system messages about jobs. The system log displays the first of these messages. You can select a job from the system log to display all system messages for that job.

A selection window in the Logging facility asks you to select the default log according to owner, network, job and run number.

For more information, see the section Log Information.
