

# Active Job Networks - Overview

This section covers the following topics:

- Overview
  - Active Data Base
  - Maintaining Active Job Networks
  - Maintaining Active Jobs
  - Maintaining Active Conditions
- 

## Overview

Entire Operations allows extensive modification of job networks and jobs after activation.

This section explains the maintenance functions you can perform on active jobs and networks using the Active Job Networks option on the Main Menu.

For example, you can modify active copies of a job definition, including associated logical conditions, resources and JCL. All modifications to active jobs take place on the active data base and are valid for the current job run only, so that all original definitions on the master data base remain unchanged.

Your user profile must contain the appropriate authorization to access active networks.
