

Modifying Scheduling Parameters

You can modify the scheduling parameters for a specific job run without changing the originally defined job schedule table

 **To do so:**

1. Type **A** in the line command input field of the selected job on the Active Jobs screen.
2. Press Enter.

The Schedule Definition window opens displaying the current schedule values in the same format as defined for the job on the master data base.

You can modify the schedule in the same way as described in the subsection Scheduling a Job in the section Job Maintenance.
