

Calling Job Information

This function can be used for active jobs only, which are part of an active **subnetwork**.

 **To call job information:**

- Enter the line command **Y** (see Line Commands: Show the calling Job) for a resource in the description of the Active Jobs Screen.

The following window opens:

```

+-----+
!                                     !
!               Calling Job Information           !
!                                     !
!   Owner      Network      Run Job           !
! Sub-Network  SN          A-3      3348 BEGIN  !
! called by    SN          SUB-1      7 J2      !
!                                     !
! ---PF1---PF3-----PF6----- !
!   Help   End                Calling Network  !
+-----+
    
```

Special PF Key

PF Key	Name	Function
PF6	Calling Network	Invokes the list of active jobs of the calling network. From there you can return to this window by pressing PF3.
