

Introduction

This documentation is intended for the Natural ISPF system administrator and describes Natural ISPF administration procedures. Separate sections explain how to set up the Natural ISPF environment according to the requirements of your site.

Further customization facilities are described in the Natural ISPF Programmer's Guide.

This section covers the following topics:

- A Note about Subsystems
 - Naming Conventions
-

A Note about Subsystems

Reference throughout this documentation is made to the source management systems PANVALET and CA-LIBRARIAN.

- PANVALET is a product of PANSOPHIC Systems
- CA-LIBRARIAN is a product of Computer Associates

Naming Conventions

The section Natural ISPF Libraries of this documentation contains a table that lists all Natural ISPF libraries as they appear after loading the installation tape, together with a descriptive name as to the library content. For example, a library named SYSISPX could be the Exit Library.

From the section System Configuration onwards, Natural ISPF libraries are referred to by their descriptive names (for example, Exit Library instead of SYSISPX).
