

# Further Customization Using Open NSPF

In addition to the administration functions mentioned above, you can further customize Natural ISPF to the requirements of your site using the Open NSPF facility. This allows you to:

- Define site-specific commands (for example, MAIL to check your automatic office system for a new item).
- Define site-specific objects and relate them to functions (for example, define EMPLOYEE as a new object and relate it to functions LIST, INFORMATION, DELETE).

The Open NSPF facility is described in detail in the Natural ISPF Programmer's Guide.
