

# Editor Session with No Prefix

You can work with an Editor session in EDIT or BROWSE mode without the prefix area (line numbers) displayed. The data area is then increased by 7 columns. This feature is controlled by the PREFIX session command.

The command format is:

<b>PREFIX [ON] [OFF]</b>
------------------------------

The default value is ON. When the prefix area is OFF, you can issue line commands by typing them in the data area preceded by the escape character.
