

Natural System Error Messages NAT3101-NAT3150

NAT3101: Error in Adabas FASTPATH processing. DB/FNR :1/:2:

Text	Error in Adabas FASTPATH processing.
Expl.	For explanation of this error, please refer to Adabas response code 101 in the Adabas Messages and Codes documentation.

NAT3102: Space calculation error. DB/FNR :1/:2:

Text	Space calculation error.
Actn.	Retry the OPEN operation.

NAT3103: An ADA STAR call was sent to an isolated database. DB/FNR :1/:2:

Text	An Adabas STAR call was sent to an isolated database.
Actn.	Stop the database and restart it with the ADARUN parameter ADASTAR=YES or ADASTAR=NO.

NAT3104: Program tried to call an ADA STAR replicated file. DB/FNR :1/:2:

Text	Program tried to call an Adabas STAR replicated file.
Expl.	The program attempted to make a logical call to a physical file defined as an Adabas STAR replicated file.
Actn.	Use only the logical file number when issuing calls.

NAT3106: Record buffer specified too small. DB/FNR :1/:2:

Text	Record buffer specified in user control block too small.
Expl.	The Prefetch record buffer, as specified in the user control block, is too small.
Actn.	Contact your database administrator.

NAT3107: GETMAIN error or not enough space for Prefetch. DB/FNR :1/:2:

Text	GETMAIN error or not enough space when doing Prefetch.
Expl.	When performing Prefetch, either a GETMAIN error occurred or there was not enough space available. Prefetch is switched off.
Actn.	Contact your database administrator.

NAT3109: Command ID already active on another database. DB/FNR :1/:2:

NAT3110: The Command ID pool is full.DB/FNR :1/:2:

Text	The Command ID pool is full.
Actn.	Increase the size of either or both the ADARUN NQCID or NU parameters.

NAT3112: EXU status for ADA STAR replicate file not allowed.DB/FNR :1/:2:

NAT3113: The specified ISN was invalid. DB/FNR :1/:2:

Text	The specified ISN was invalid.
Expl.	This error may have one of the following reasons: - An HI command was issued with ISN less than MINISN. - An N2 command was issued with ISN either equal to 0 or greater than the MAXISN in effect for file. - An N2 command was issued and the specified ISN was assigned to another record in file. - AN A1/A4, L1/L4, E1/E4, or S1/S2/S4 (with FB) command was issued for a non-existent ISN.
Actn.	Check program and correct error, or contact your database administrator.

NAT3114: E1 command not allowed or specified with ISN=0. DB/FNR :1/:2:

Text	E1 command either not allowed or specified with ISN=0.
Expl.	Either a Refresh File function using the E1 command was issued and not allowed or else ISN=0 was specified for the E1 command.

NAT3144: The specified ISN was not in "hold" status. DB/FNR :1/:2:

Text	The specified ISN was not in "hold" status.
Expl.	The ISN specified with an UPDATE command was not in "hold" status for the user.
Actn.	Check program and correct error, or contact your database administrator.

NAT3145: Record not available at the moment. DB/FNR :1/:2:

Text	Record not available at the moment.
Expl.	1. An Adabas call attempted to read a record which was already in "hold" status for another user for subsequent updating. 2. There was a hold queue overflow.
Actn.	See RETRY statement in the Natural Reference documentation.

NAT3146: An invalid buffer length was detected. DB/FNR :1/:2:

Text	An invalid buffer length was detected.
Expl.	An invalid buffer length was detected by the Adabas interface routine.
Actn.	Contact your database administrator.

NAT3147: ISN invalid: negative or greater than maximum ISN. DB/FNR :1/:2:

Text	ISN invalid: either negative or greater than maximum ISN.
Expl.	The ISN was invalid. The ISN transformation resulted either in a negative ISN or in an ISN which was greater than the maximum ISN permitted for the file.
Actn.	Contact your database administrator.

NAT3148: Database :1:,network ID :3: currently not active. Subc :2:

Text	Database :1:,network ID :3: currently not active. Subc :2:
Expl.	The database which Natural or a Natural program tried to access was not active or not accessible when the attempt was made. For detailed information see the subcode.
Actn.	Start the database or contact your database administrator.

NAT3149: Active "CLU" user attempted "OP" command. DB/FNR :1/:2:

Text	Active "CLU" user attempted "OP" command.
Expl.	An active "CLU" user attempted to issue an "OP" command.
Actn.	Check program and correct error, or contact your database administrator.
