

Installing NDB - General Information

This section covers the following topics:

- Installation Jobs
 - Using System Maintenance Aid
 - Prerequisites
-

Installation Jobs

The installation of Software AG products is performed by installation jobs. These jobs are either created manually or generated by System Maintenance Aid (SMA).

For each step of the installation procedure described later in the section Installing Natural for DB2, the job number of a job performing the respective task is indicated. This job number refers to an installation job generated by SMA. If you are not using SMA, an example job of the same number is provided in the job library on the NDB installation tape; you must adapt this example job to your requirements. Note that the job numbers on the tape are preceded by a product code (for example, NDBI070).

Using System Maintenance Aid

For information on the use of Software AG's System Maintenance Aid for the installation process, refer to the System Maintenance Aid documentation.

Prerequisites

- Base Natural Version 4.1 or above must be installed first; you cannot install Natural 4.1 and Natural for DB2 Version 4.1 at the same time.
- The Software AG Editor must be installed (see Installing the Software AG Editor in the Natural Installation Guide for Mainframes).
- If you want to use the DB2 DL/I batch support (DSNMTV01), the Natural interface to DL/I is required.

Further product/version dependencies are specified under Natural and Other Software AG Products and Operating/Teleprocessing Systems Required in the current Natural Release Notes for Mainframes.
