

# User Comments

You have the following possibilities for entering your comments in source code:

- If you wish to use an entire source-code line for a user comment, you enter one of the following at the beginning of the line:
  - an asterisk and a blank (\* ),
  - two asterisks (\*\*), or
  - a slash and an asterisk (/\*):
    - \* USER COMMENT
    - \*\* USER COMMENT
    - /\* USER COMMENT
- If you wish to use only the latter part of a source-code line for a user comment, you enter a blank, a slash and an asterisk (/); the remainder of the line after this notation is thus marked as a comment:  
ADD 5 TO #A                    /\* USER COMMENT
