

# call-name

$\left\{ \begin{array}{l} \textit{function-name} \\ \textit{prototype-variable-name} \end{array} \right\}$
--

Operand	Possible Structure			Possible Formats												Referencing Permitted	Dynamic Definition	
prototype-variable-name	S	A		A													yes	no

The function-name clause is the symbolic function name. The corresponding function definition is defined in a certain Function object file.

The prototype-variable-name is the name of the variable containing the real name of the function which is to be called. An alphanumeric variable with the same name must have already been defined.
