

AUTORPC - Automatic Natural RPC Execution

For static specification, this parameter is available as a keyword subparameter of the NTRPC macro. For dynamic specification, this parameter is available as a subparameter of the profile parameter RPC.

This parameter determines whether or not Natural RPC will automatically try to execute a subprogram remotely (on the server side) which was not found locally (on the client side). For details see Stubs and Automatic RPC in the Natural Remote Procedure Call documentation.

AUTORPC is specified on the client side only.

Possible settings	ON	Natural RPC will automatically try to execute it remotely.
	OFF	Natural RPC will not automatically try to execute it remotely. If AUTORPC=OFF, you can execute CALLNATs remotely using stubs.
Default setting	OFF	
Dynamic specification	YES	
Specification within session	YES	At runtime, this value can be overwritten using the Parameter Maintenance function of the SYSRPC utility.

For additional information on Natural RPC, see the Natural Remote Procedure Call documentation.
