

CDYNAM - Dynamic Loading of Non-Natural Programs

This Natural profile parameter is for:

- Mainframes
- UNIX and Windows

This parameter determines how many non-Natural programs can be loaded dynamically by Natural during the execution of a single Natural program.

Possible settings	0 - 1024	Determines the maximum number of non-Natural programs which can be loaded per Natural program. If CDYNAM=0, no dynamic loading of non-Natural programs will be performed by Natural.
Default setting	5	
Dynamic specification	YES	
Specification within session	NO
