

CLEAR - Processing of CLEAR Key in NEXT Mode

This Natural profile parameter is for:

- Mainframes
- UNIX and Windows

It causes Natural to execute a specific Natural terminal command whenever CLEAR is pressed during program execution in NEXT mode.

Possible settings	any character	The default action can be overridden by supplying a character which, when appended to the terminal-command control character (as specified with the CF parameter), forms a valid Natural terminal command. Example: CF=% CLEAR=R Natural executes the terminal command "%R" when CLEAR is pressed in NEXT mode.
Default setting	%	By default, when the CLEAR key is pressed, Natural responds as if the user had entered the terminal command "%%".
Dynamic specification	YES	
Specification within session	NO
