

DC - Character for Decimal Point Notation

This Natural profile and session parameter is for all platforms.

It determines the character to be used for decimal point notation.

Within a Natural session, the profile parameter DC can be overridden by the session parameter DC.

Possible settings	any character (except numeric characters)	You specify the DC parameter as DC='c' where c represents the character to be used as decimal point. The character specified with the DC parameter <ul style="list-style-type: none"> ● must not be the same as the one specified with the IA profile/session parameter (input assign character), STACKD profile parameter (stack delimiter character) or ID profile/session parameter (input delimiter character), ● should not be the same as the one specified with the CF profile/session parameter (control character for terminal commands) or HI profile parameter (help character). 		
Default setting	. (period)			
Dynamic specification	YES			
Specification within session	YES	Applicable Statements:	SET GLOBALS	Parameter is evaluated at runtime.
		Applicable Command:	Globals	Parameter may be specified dynamically with the GLOBALS system command.
