

DELETE - Deletion of Dynamically Loaded Programs

This Natural profile parameter is for mainframes only.

It determines whether dynamically loaded non-Natural programs are to be deleted at the completion of the Natural program in which they are used.

Possible settings	ON	Dynamically loaded non-Natural programs are deleted at the end of the Natural program in which they were loaded.
	OFF	Dynamically loaded non-Natural programs are not deleted at the end of the Natural program in which they were loaded; they are kept until command mode is entered again, and the deletion is performed immediately before Natural enters command mode processing.
Default setting	ON	
Dynamic specification	YES	
Specification within session	NO	

The following platform-specific requirements apply:

Platform:	Comment:
Under CICS	In a CICS environment, this parameter applies only if the non-Natural program is invoked via standard linkage conventions (SET CONTROL 'P=S').
Under OS/390 Batch, TSO, VSE/ESA Batch and IMS/TM	This parameter does not apply in an IBM Language Environment (LE). All dynamic subprograms loaded during a Natural session are deleted upon LE environment termination, that is, during the termination of the Natural session. For more information about Natural in an LE environment, see Support of IBM Language Environment Subprograms (in the Natural Operations for Mainframes documentation).
