

DSC - Data-Stream Compression (for 3270-Type Terminals)

This Natural profile parameter is for mainframes only. It only applies to 3270-type terminals.

With this parameter, you can switch off Natural's automatic optimization of the screen data stream for 3270-type terminals.

Possible settings	ON	Data-stream compression is used.
	OFF	Data-stream compression is not used.
Default setting	ON	
Dynamic specification	YES	
Specification within session	NO	

Natural's screen optimization causes screen data to be sent as compressed as possible. If this should conflict with any TP monitor's screen optimization or hardware limitation, you can use this parameter to switch off Natural's screen optimization; screen data will then be sent in non-compressed form.

This parameter has the same function as the terminal command %RO.

If you use the BX session parameter settings BX=L or BX=R, you should switch off Natural's screen optimization using DSC=OFF or %ROOFF..
