

ESXDB - Database ID Used for Entire System Server DDMs

This Natural profile parameter is for Unix and Windows platforms only and applies to the Entire System Server Interface.

It specifies the database ID used for Entire System Server's DDMs.

| | | |
|-------------------------------------|------------|--|
| Possible settings | 0 or 1-254 | <p>Database ID. To activate this parameter, a database ID in the range of 1 to 254 must be specified.</p> <p>Note: Entire System Server's DDMs are cataloged with DBID=148. If you are using an Adabas database with this DBID, specify a different number for ESXDB. For information on how to do this, please refer to:</p> <ul style="list-style-type: none"> ● Setting up the Entire System Server Interface in the Natural Operations for Windows documentation, or ● Setting up the Entire System Server Interface in the Natural for UNIX Installation documentation. <p>With ESXDB=0, the Entire System Server Interface is not active.</p> |
