

MADIO - Maximum DBMS Calls between Screen I/O Operations

This Natural profile parameter is for:

- Mainframes
- UNIX and Windows

It indicates the maximum number of DBMS calls permitted between two screen I/O operations (also in batch mode).

| | | |
|-------------------------------------|------------|---|
| Possible settings | 30 - 32767 | Maximum number of DBMS calls. |
| | 0 | MADIO=0 indicates that no limit is to be in effect. |
| Default setting | 512 | |
| Dynamic specification | YES | |
| Specification within session | NO | |

If the specified limit is exceeded, the Natural program is interrupted and the user is notified with Natural Error Message 1009.
