

NTASKS - Number of Server Tasks to be Started

This parameter is for mainframes only.

For static specification, this parameter is available as a keyword subparameter of the NTRPC macro. For dynamic specification, this parameter is available as a subparameter of the profile parameter RPC.

NTASKS=*nn* specifies the number *nn* of server tasks to be started.

If the server has to handle a large number of client requests, you can use this subparameter to improve the throughput by starting multiple (identically named) copies of the same server process.

Possible values:	1 - 99	Number of copies of one server process.
Default value:	1	
Dynamic specification	YES	
Specification within session	NO	

For additional information on Natural RPC, see the Natural Remote Procedure Call documentation.
