

PLUGIN - Enable the Natural Plug-In Components

This Natural profile parameter is for mainframes only.

It is used to enable new or additional Natural components without having to link new components to your Natural nucleus or to apply specific fixes.

Possible settings	OFF	Deactivates all plug-in components, see note below.
Default setting	OFF	
Dynamic specification	YES	
Specification within session	NO	

Note:

Because all components of Natural Version 3.1 that could be enabled using the profile parameter PLUGIN are an integral part as of Natural Version 4.1, the only possible setting of this parameter is OFF.
