

SHELL - Grant Shell Access to Natural User

This Natural profile parameter is for UNIX only.

It can only be set by Natural administrators. This parameter allows or disallows the shell exit from the Natural Main Menu for specific users.

Be careful when granting shell access to a Natural user. This might introduce security problems, because the user would then be able to use the underlying features of the operating system.

Possible settings	YES	Shell exit is allowed. If the shell exit is allowed for a user, the name of the shell that will be started for this user can be specified by the administrator. This shell name must be the full path name of an executable UNIX program, for example, "/bin/csh".
	NO	Shell exit is not allowed.
Default setting	NO	
Dynamic specification	NO	
Specification within session	NO
