

SI - Shift-In Code for Double-Byte Character Set

This Natural profile parameter is for mainframes only.

It is only relevant for Asian countries which use double-byte character sets (DBCS). The parameter is used to specify a shift-in code.

Possible settings	0F	Shift-in code for IBM hardware.
	29	Shift-in code for Fujitsu hardware.
Default setting	none	
Dynamic specification	YES	
Specification within session	NO	

The shift-in code is used to indicate the point at which the code of character representation is shifted from double-byte mode back into normal (single-byte) mode. The beginning of the double-byte character representation (shift-out code) is indicated by the setting defined with the profile parameter SO.
