

NTASKS - Number of Server Tasks to be Started

This parameter is for mainframes only.

It is used as keyword parameter in the NTRPC macro or as subparameter in the RPC profile parameter.

NTASKS=*nn* specifies the number *nn* of server tasks to be started.

If the server has to handle a large number of client requests, you can use this option to improve the throughput by starting multiple (identically named) copies of the same server process.

Possible values:	1 - 99	Number of copies of one server process.
Default value:	1	
Dynamic specification	YES	
Specification within session	NO	

For additional information on Natural RPC, see the Natural Remote Procedure Call documentation.
