

NTASKS - Number of Server Tasks to be Started

This parameter is for mainframes and is only used as a keyword parameter in the NTRPC macro or as a subparameter in the RPC profile parameter.

NTASKS=*nn* specifies the number *nn* of server tasks to be started.

If the server has to handle a large number of client requests, you can use this option to improve the throughput by starting multiple (identically named) copies of the same server process.

Possible values:	1 - 99	Number of copies of one server process.
Default value:	1	
Dynamic specification	YES	
Specification within session	NO	

For additional information on Natural RPC, see the Natural Remote Procedure Call documentation.
