

RFILE - File for Recordings

This Natural profile parameter is for mainframes only.

It determines where recordings (that is, the data recorded by the Recording function) are stored.

Possible settings	SPAD	Recordings will be stored in the scratch-pad file. (If no scratch-pad file is defined, the recordings will be stored in the system file FUSER.)
	FUSER	Recordings will be stored in the system file FUSER.
	FNAT	Recordings will be stored in the system file FNAT.
Default setting	SPAD	
Dynamic specification	YES	
Specification within session	NO	

For details on the Recording function, see the Recording utility in the section Debugging and Monitoring.
