

SD - Time Delay between Two Screens

This Natural profile parameter is for UNIX and Windows platforms only.

It delays the time related to screen output display. This is the time delay between two screens during a non-conversational write operation (see the Natural terminal command %N in the Natural Reference documentation).

Possible settings	0 - 100	The unit for the specified setting is a tenth of a second, which means that "SD=10" leads to a delay of one second.
Default setting	0	
Dynamic specification	NO	
Specification within session	NO
