

TMODEL - IBM 3270 Terminal Model

This Natural profile parameter is for IBM mainframes only.

TMODEL controls the IBM 3270 terminal model number for online environments, e.g. under IMS/DC. It is used to determine the number of lines and columns of the terminal screen.

Possible settings	0	The screen size is determined by the environment-dependant driver module. If possible, it gets the screen size information from its subsystem. Otherwise, the definitions of default model 2 are used, e.g. under IMS/DC.
	2	The screen size is 24 lines and 80 columns.
	3	The screen size is 32 lines and 80 columns.
	4	The screen size is 43 lines and 80 columns.
	5	The screen size is 27 lines and 132 columns.
Default setting	0	
Dynamic specification	YES	
Specification within session	NO	

Note:

If your TMODEL specification is incompatible with the physical terminal screen size, the output data may be displayed incorrectly or hardware errors may occur.

Under CICS:

This parameter is ignored because the terminal size is defined by the CICS terminal control table.
