

TRACE - Define Trace Level for Natural RPC Servers

This Natural profile parameter is for UNIX and Windows.

Note for mainframes:

Use the keyword parameter TRACE of the NTRPC macro for static specification, or the subparameter with the same name of the profile parameter RPC.

It activates the RPC trace facility and determines the trace level *n* to be used. For further information, see Using the Server Trace Facility p.p. in the Natural Remote Procedure Call documentation.

Possible settings	0	Nothing is traced.
	1	Only messages (inclusive Natural errors) are traced.
	2	All messages and data from/to client are traced.
Default setting	0	
Dynamic specification	YES	
Specification within session	NO	

The values 3-9 displayed in the selection box are for future use. If one of these values is chosen, then TRACE=2 is selected.
