

# SYSFILE

<code>SYSFILE</code> [ { <u>W</u> ORKFILE } ]
---

This command is used to invoke the Work and Print Files function of the Natural SYSFILE utility.

This function provides information on the work files and print files available.

<code>SYSFILE</code>	If you enter only the command SYSFILE itself, work file <b>and</b> print file assignments are displayed.
<code>SYSFILE <u>W</u>ORKFILE</code>	Only the work file assignments are displayed.
<code>SYSFILE <u>P</u>RINTER</code>	Only the print file assignments are displayed.

For further information, see the Natural Utilities documentation.
