

SYSUNLD

This command is for Mainframe and UNIX platforms only.

Note that the functionality of SYSUNLD is covered by the Natural Object Handler.

This command is used to invoke the library SYSUNLD.

SYSUNLD

SYSUNLD contains the Natural utilities NATUNLD and NATLOAD which are used to transfer Natural programming objects, error messages and DDMs between system files and work files.

These utilities are described in the Natural NATUNLD/NATLOAD Utilities documentation.
