

SYSTRANS

This command applies to all platforms.

Attention Note that the functionality of the SYSTRANS utility is covered by the Natural Object Handler.

This command is used to invoke the SYSTRANS utility.

SYSTRANS

You use SYSTRANS to transfer all Natural objects, maps, DDMs, libraries, command processors and error messages as well as Adabas FDTs from one hardware platform to another.

This utility is described in the Natural SYSTRANS Utility documentation.
