

%* - Inhibit Character Display

Command Syntax

<pre>%*</pre>

The following topics are covered below:

- %* in Online Mode
- %* in Batch Mode

%* in Online Mode

This command may be used when entering sensitive data (e.g., passwords). %* causes all fields on the current screen to be non-displayable.

When used with the SET CONTROL statement, %* causes all fields on the next screen to be non-displayable.

%* in Batch Mode

Note:

This command is for Mainframes only.

In batch mode, %* causes printing of the next input data record to be suppressed. The input line after the line which contains %* will not be printed. This is useful, for example, for suppressing the printing of passwords.

Example of %* in Batch Logon to Natural Security:

```
//CMSYNIN DD *
%*
SYSSEC, DBA, DBA
...
```

The printing of all input data in batch may be controlled with the ECHO profile parameter (see the Natural Parameter Reference documentation).
