

%A - Play Back a Recording

Note:

This command is for Mainframes only.

Command Syntax

<p>%A <i>name</i></p>

With the terminal command **%Aname**, you cause the recording saved under that *name* to be executed again. This requires that your current library is the one in which the recording is stored.

If you issue the command **%Aname** while a session is being recorded, the recording specified with **%Aname** will not be executed but the command **%Aname** is included into the source that is being recorded. Thus, you can execute a recording from within another recording and concatenate a series of recordings to one another. However, you cannot have nested recordings; the execution of the recording that contains the **%Aname** command stops after that command and is not resumed when the execution of name finishes.

Further information on recording is provided in the section Recording in the Natural Utilities documentation.
