

%P - Capture Screen Sequence

Note:

This command is not available with Natural for Windows.

Command Syntax

%P

With this command, you activate the NATPAGE screen paging function (NATPAGE utility) to capture the current screen and all subsequent screens.

The maximum number of screens that can be captured is determined by the session parameter PD. If this number is exceeded, each additional screen will overwrite one that has already been captured, beginning with the one captured first.

All screens that have been captured with previous %P and %I commands will be deleted when you issue a %P command.

To display screens that have been captured, you use the terminal command %E.

See also the terminal commands %E, %I, %O and %S.
