

Set Test Mode ON/OFF

To activate a previously established debug environment, test mode must be switched on.

 **To set Test Mode to ON or OFF**

- On the Debug Main Menu, enter Function Code **T** to activate and deactivate.
Or enter the direct command TEST ON or TEST OFF.

When executing a Natural object with test mode ON, the Natural debugger continuously checks all debug entries for any required action.

When executing a Natural object with test mode OFF, all debug entries are ignored.

The command TEST, and with it the whole application, can be protected by Natural Security. Individual functions within the Natural Debugger, however, cannot be protected.
