

# Natural Installer - General Information

The Natural Installer is used to install in your local environment Natural add-on products such as, Natural Security (alle, aufzählen???) .

The Natural Installer provides a wizard that guides you through a sequence of windows. These help you to perform the installation step by step.

The Natural Installer is stored in the Natural system library SYSOBJH.

## To invoke the Natural Installer, choose any option below:

1. In the Natural main window, from the Tools menu, choose Configuration Tools and Natural Installer.
2. Or, in the Natural main window, from the View menu, choose Command Line and enter the system command SYSINST.
3. Or, **execute** (???) the Natural program NATINST.  
NATINST is stored in the Natural system library SYSOBJH.

The Natural Installer welcome window is displayed. Follow the instructions specified in this window and all subsequent windows.
