

Object Handler - Overview

The Natural Object Handler is designed to process Natural and non-Natural objects for distribution in Natural environments. This is done by unloading the objects in the source environment into work files and loading them from work files into the target environment.

The Object Handler documentation covers the following topics:

●	General Information	Invoking the Object Handler, using batch or online mode and applying Natural Security.
●	Functions	Using the functions provided for processing objects: unload, load, restart load, scan, view, find and administration.
●	Object Specification	Specifying objects to be processed.
●	Settings	Specifying option and parameter settings for Object handler functions.
●	Workplans	Creating standard procedures for executing Object Handler functions.
●	Name, Date and Time Specification	Specifying names, dates, times and ranges.
●	Work Files	Work files used by the Object Handler.
●	Commands	Direct commands and syntax for executing functions and Workplans of the type PROCEDURE.
●	Batch Condition Codes and User Exit Routines	Condition codes and user exit routines provided in batch mode.
●	Tools	Displaying status information and setting trace and report options.
●	SYSOBJH Profile	Setting up a profile for defining individual defaults and standard procedures.
