

Object Handler - Functions - Overview

This section describes the main functions provided by the Object Handler. To guide you through the steps required to execute the unload, load and scan functions, you can take advantage of the Object Handler wizards. The wizards are activated by default. If you prefer the unload, load or scan mode for the experienced user instead, on the Natural Object Handler Main Menu, mark the field next to "Advanced user" or, in the SYSOBJH profile, set Advanced-Mode to **Y** (Yes). See also SYSOBJH Profile.

To automate function processing, for the unload, load or scan function, the Object Handler provides the option to create standard procedures to define recurring settings and object specifications. See the section Workplans for further information.

This section covers the following topics:

- Wizards
- Advanced User
- Restart Load
(section: Settings)
- View
- Find
- Administration
- Change Workplan Library
(section: Administration)
